

What is DevOps?

Learn how DevOps unifies people, process and technology to bring better products to customers faster.

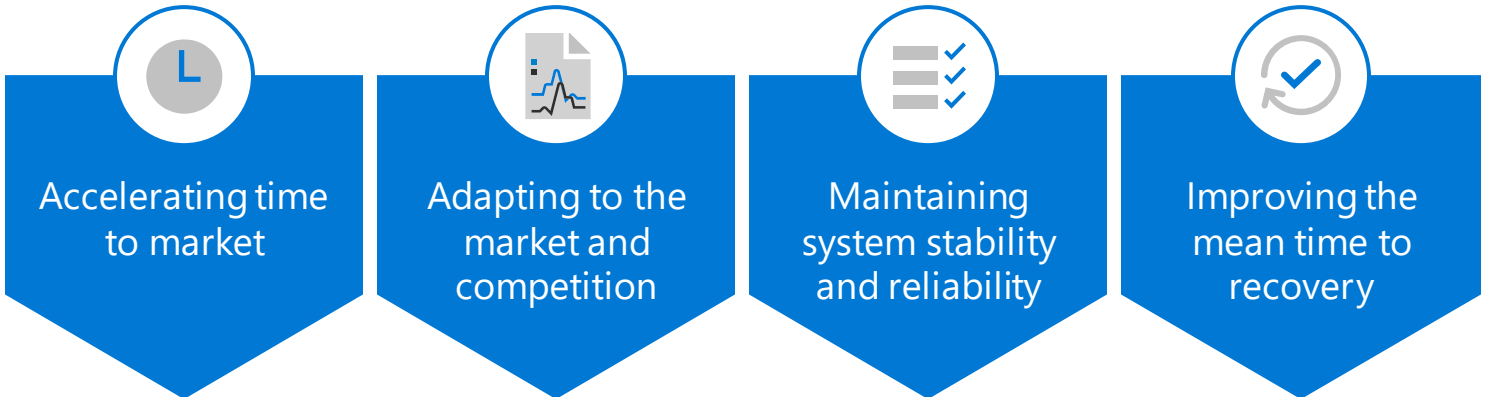

DevOps definition

DEVELOper + OPERations

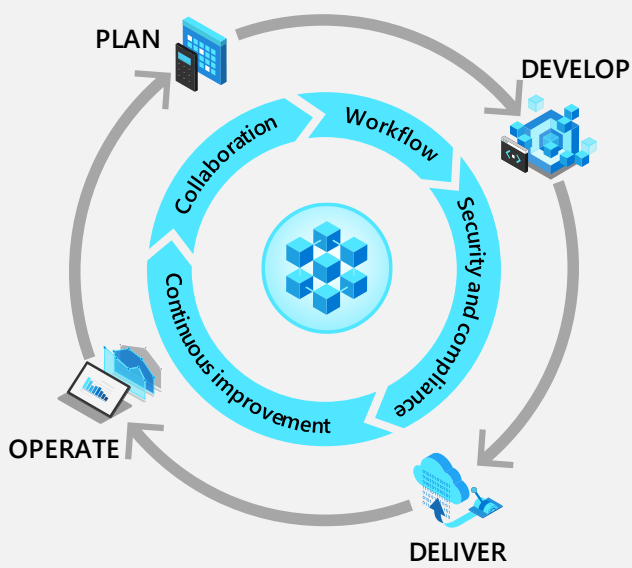

A compound of development (Dev) and operations (Ops), DevOps is the union of people, process and technology to foster a culture of continually providing value to customers.

The benefits of DevOps

Teams that adopt DevOps culture, practices and tools become high-performing, building better products faster for greater customer satisfaction.

DevOps and the application lifecycle

DevOps influences the application lifecycle throughout its plan, develop, deliver and operate phases. Each phase relies on the others, and the phases are not role-specific. In a true DevOps culture, each role is involved in each phase to some extent.

DevOps culture

While adopting DevOps practices automates and optimises processes through technology, it all starts with the culture inside the organisation – and the people who play a part in it.
