Windows Virtual Desktop

Understanding the virtual environment

As organisations become more complex, users needs change. They might work...

- on specific tasks
- from a remote location
- a flexible schedule
- as independent contractors
- OR
- from their own devices

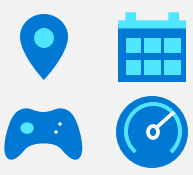

Wherever they are...

and whatever device they use...

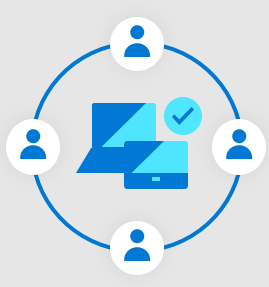

they have access to the apps they need...

to keep them connected to each other...

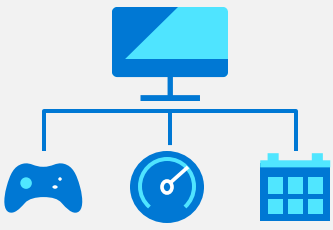

and to the information...

to keep them productive.

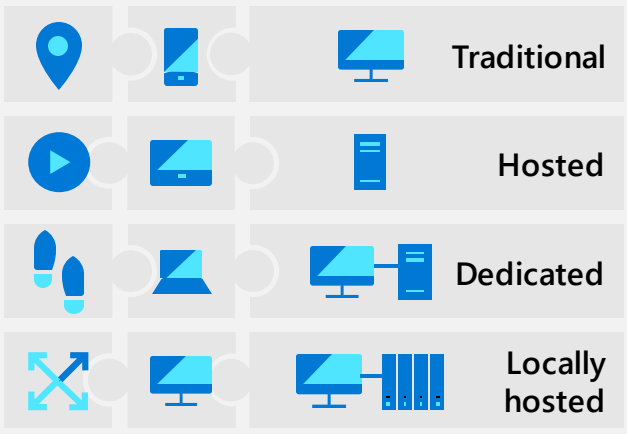

With diverse devices and a disparate workforce, it's sometimes safer to separate applications from device

Matching workstyles, devices and platforms can be confusing
