

Companies choose Azure for Windows Server and SQL Server because of its unmatched security

Enterprises already choose Windows Server and SQL Server for their proven security and compliance capabilities.

Today, they're discovering that they not only run best on Azure, but that Azure delivers multiple layers of security, including the secure foundation of our physical data centres, operational best practices, and engineering processes that follow industry-standard guidelines.

Unmatched security

\$1 billion

security investment
every year

6.5 trillion

threat signals
analysed daily

3.500

dedicated
security experts

90+ compliance offerings

Uncompromising commitment
to privacy

We're seeing a huge benefit in terms of scalability. We build out resources in the cloud as we need them, in a way that would have been impossible in a physical data centre. We also trust in the security of Azure, which is important for any business site.
